

# PIPESERV

## Service Solutions

### PipeTest for Hydrotesting

Monitors pressure and temperature as needed during all stages of a hydrostatic pressure test to detect leaks

#### Benefits:

- Detects new leaks in under 2 minutes.
- Locates new leaks within  $\pm 50$ ft.
- Identifies pre-existing leaks through pigging.
- Confirms pipeline stabilization and test integrity.

### PipeScan for Blockages/Stuck Pig

Accurately locates pipeline blockages, including stuck pigs, wax, and debris

#### Benefits:

- Uses advanced hardware and software to detect blockages.
- Induces pressure pulses to identify blockages.
- Provides precise location with high sample rate signals.
- Works in both static and flowing conditions.

### PipeScan for Pre-Existing Leaks

Combines monitoring and leak detection to pinpoint pre-existing leaks with minimal setup

#### Benefits:

- Detects and locates pre-existing leaks through pigging.
- Portable hardware for quick deployment.
- Data analysis for location confirmed in 3-6 hours.

PipeSense applies cutting-edge, ultra-high-frequency pressure sampling and machine learning technology to detect, pinpoint, and validate even the smallest anomalies with unparalleled precision and speed.
