

PIPESERV Service Solutions

PipeTest for Hydrotesting

Real-time hydrotest monitoring eliminates guesswork and shortens timelines by delivering high-resolution pressure and temperature data to detect even the smallest changes—helping operators catch leaks early, avoid retesting, and ensure regulatory compliance.

Benefits:

- HydroView client dashboard provided for each test
- Real-time pressure trends and data insights
- Real-time temperature corrected pressure floor for the test
- True correlation between temperature change and test pressure to correctly identify very small leaks
- Real-time leak location for newly formed detected leaks

PipeScan for Blockages/Stuck Pigs

Accurately locates pipeline blockages, including stuck pigs, hydrate plugs, wax, and debris.

Benefits:

- Induced pressure pulses to identify blockages
- Provides precise location with ultra-high sample rate
- Works in both static and flowing conditions
- Data analysis for location confirmed in 4-6 hours

PipeTrack for Pig Tracking

Real-time pig tracking with minimal setup.

Benefits:

- Operator dashboard with precise mapping
- Eliminates need for field trackers
- Deploys on any diameter liquid pipeline
- PipeScan can be utilized if needed with same equipment
